

Abstract

Process for applying conductor tracks to the surface of plastics moldings,
and the resultant moldings

5

A process is described in which surfaces of foamed plastics are provided
with electrical conductor tracks, with the aid of selectively ablating
processes.

10

The process permits low-cost production of moldings from plastic with
conductor tracks integrated on the surface.

The products of the process may be used in the electrical and electronics
15 industries, for example.
